

PREDATOR

GENERAL CHARACTERISTICS

Aircraft:	MQ-9A	MQ-1C
Length:	10,80 m	8,20 m
Wingspan:	20,10 m	14,80 m
Height:	3,80 m	1,82 m
Speed :	445 km/hr	160 km/hr

OVERVIEW

The Predator aircraft, with its most advanced and updated version which is the MQ-9A Predator B, is a remote-controlled, long-life, mid-height system for surveillance and reconnaissance missions.

In January 1994 it was been awarded a contract to General Atomics Aeronautical System for the execution of the Level II Predator program. The Predator system flew for the first time in 1994 and went into production in August 1997.

Peculiarities guarantee high performance in the conduct of ISTAR (Intelligence, Surveillance, Target Acquisition and Reconnaissance) and for maritime and terrestrial missions, in patrol search and rescue operations.

MQ-9A PREDATOR B

MQ-1C PREDATOR A+
